

Dear Hiring Manager,

I am writing to express my strong interest in the software role at DeFiner. As a Full Stack Software Engineer, I am excited to contribute my skills in full stack application developing and problem solving to your team.

Graduating from Hack Reactor, an immersive and rigorous software engineering program, I have had the opportunity to build complex projects with a focus on user experience and backend functionality. For example, Care Pilot, a full-stack microservices web application designed to provide a platform for patients to make instant appointments and meet with doctors online. I led a team of five engineers and built it in three weeks with agile methodology and Git. We utilized FastAPI and Postgre SQL for backend and React Redux for frontend. We verified reliability with unit tests. And finally, I implemented Oauth Zoom API for meeting creation. These experiences have equipped me with a solid foundation in full stack web application skills including python, javascript and postgresSQL, and I am confident these skills make me an excellent candidate for this position.

These projects, in addition to being technically demanding, have continually demonstrated my value of collaboration. I have developed a wealth of knowledge through working closely with my team of engineers as we brought different strengths to the table. In my previous role at onsemi and Globalfoundries in the semiconductor industry, I regularly worked with cross-functional teams, fostering effective communication and synergy among team members. I understand the importance of teamwork and how different departments within a company rely on each other to achieve common goals.

I am excited about the opportunity to discuss how my skills and experiences align with the needs of DeFiner. Thank you for considering my application. I look forward to sharing more about my experience and skills throughout the interview process.

Sincerely,
Shiran
